in Het Kikani

🔗 Het Kikani

🇮🇳 INDIAN

Summary

Innovative and solutions-driven Computer Science Engineering student specializing in Data Science. Transitioned from a strong technical foundation in Computer Engineering to building complex, full-stack, and AI-powered applications. Developed a robust portfolio of self-directed projects utilizing deep learning architectures, sentiment analysis, semantic clustering, and cloud ecosystems. Highly fluent in English, Hindi, and Gujarati with a strong foundation in database design, systems troubleshooting, and agile project execution.

Education

07/2025 – Present
Ahmedabad, India

B.Tech Computer Science Engineering (Data Science),
SAL College of Engineering / Gujarat Technological University

08/2022 – 05/2025
Ahmedabad, India

Diploma in Computer Engineering, L.J Polytechnic

Skills

- C
- PHP
- Full Stack Web Development
- AI/ML
- HTML & CSS
- Java
- Python
- JavaScript
- React JS
- SQL

Languages

- English
- Hindi
- Gujarati

Certificates

- Developing Interpersonal Skills [🔗](#)
- Generative AI: Prompt Engineering Basics [🔗](#)
- Introduction to Python [🔗](#)
- Google Gemini Certified Student [🔗](#)
- Version Control [🔗](#)

Courses

09/2025 – 05/2026
Ahmedabad, India

Certified AI Engineer, Datamites

Projects

01/2026 – Present

QuantCore [↗](#)

An advanced, AI-powered web application for predicting Indian stock prices (NIFTY 50). This full-stack application combines machine learning models with real-time sentiment analysis to provide comprehensive market insights.

07/2026 – 07/2026

Flight Price Prediction [↗](#)

An end-to-end Data Science capstone project focusing on predicting flight ticket fares using historical data. This project includes data preprocessing, exploratory data analysis (EDA), feature engineering, testing multiple regression algorithms, evaluating them, and hosting a standalone local dashboard for fare prediction.

07/2026 – 07/2026

Flipkart Product Catalog Classifier [↗](#)

End-to-end Computer Vision project that automatically classifies product images into their respective departments for Flipkart's catalog operations team. It features a fully functional Jupyter Notebook for data processing, exploratory data analysis, and model training, along with a standalone local Flask dashboard application to present results and run live image classifications.

06/2026 – 06/2026

Customer Churn Predictor [↗](#)

End-to-end MLOps pipeline transforming 1.06M raw e-commerce transactions into a customer churn prediction engine using RFM, XGBoost, SHAP explainability, and a production-ready FastAPI service.

02/2026 – 03/2026

ConceptLens [↗](#)

ConceptLens is an advanced education platform designed to help professors create exams, analyze student performance, and detect learning misconceptions using AI. It bridges the gap between assessment and understanding with intuitive dashboards and scalable architecture.

08/2025 – 09/2025

FoundIt App [↗](#)

FoundIt! is a smart lost-and-found web application that connects lost items with found reports using a university-priority intelligent matching engine with confidence-based results and email notifications.

11/2024 – 05/2025

LegalPal [↗](#)

Welcome to LegalPal, an advanced legal ecosystem designed to bridge the gap between complex legal systems and everyday people. Whether you are a citizen seeking clarity, a law student practicing for the courtroom, or a legal professional streamlining research, LegalPal is your intelligent companion.
