Summary

Innovative and solutions-driven Computer Science Engineering student specializing in Data Science. Deploying complex AI-powered applications, Deep-Learning models, and NLP solutions (sentiment analysis, semantic clustering). Combines hands-on full-stack development with a solid technical foundation to build functional, end-to-end, data-driven systems. Highly fluent in English, Hindi, and Gujarati.

Education

07/2025 – Present
Ahmedabad, India

B.Tech Computer Science Engineering (Data Science),
SAL College of Engineering / Gujarat Technological University

08/2022 – 05/2025
Ahmedabad, India

Diploma in Computer Engineering, L.J Polytechnic

Skills

- C
- PHP
- Full Stack Web Development
- AI/ML
- HTML & CSS
- Java
- Python
- JavaScript
- React JS
- SQL

Languages

- English
- Hindi
- Gujarati

Certificates

- Developing Interpersonal Skills [🔗](#)
- Generative AI: Prompt Engineering Basics [🔗](#)
- Introduction to Python [🔗](#)
- Google Gemini Certified Student [🔗](#)
- Version Control [🔗](#)

Courses

08/2026 – 08/2026
Ahmedabad, India

AI/ML for Geodata Analysis, IIRS ISRO

09/2025 – 05/2026
Ahmedabad, India

Certified AI Engineer, Datamites

Projects

01/2026 – Present

QuantCore [↗](#)

An advanced, AI-powered web application for predicting Indian stock prices (NIFTY 50). This full-stack application combines machine learning models with real-time sentiment analysis to provide comprehensive market insights.

08/2026 – 09/2026

Sign Language [↗](#)

The system classifies static hand gestures representing 24 alphabetic signs (A through Y, omitting dynamic signs J and Z) using a transfer learning model based on **MobileNetV2** and provides an interactive **Streamlit dashboard** for real-time image prediction.

08/2026 – 08/2026

House Price Prediction [↗](#)

A Machine Learning Project Residential property valuation in Ames, Iowa. Includes full exploratory data analysis (EDA), predictive regression modeling, feature importance & SHAP analysis, and an interactive Streamlit web application.

07/2026 – 07/2026

Flight Price Prediction [↗](#)

An end-to-end Data Science capstone project focusing on predicting flight ticket fares using historical data. This project includes data preprocessing, exploratory data analysis (EDA), feature engineering, testing multiple regression algorithms, evaluating them, and hosting a standalone local dashboard for fare prediction.

07/2026 – 07/2026

Flipkart Product Catalog Classifier [↗](#)

End-to-end Computer Vision project that automatically classifies product images into their respective departments for Flipkart's catalog operations team. It features a fully functional Jupyter Notebook for data processing, exploratory data analysis, and model training, along with a standalone local Flask dashboard application to present results and run live image classifications.

06/2026 – 07/2026

RiceLeaf Disease Detection [↗](#)

To detect and classify three major rice leaf diseases: Bacterial leaf blight, Brown spot, and Leaf smut using deep learning.

06/2026 – 06/2026

Customer Churn Predictor [↗](#)

End-to-end MLOps pipeline transforming 1.06M raw e-commerce transactions into a customer churn prediction engine using RFM, XGBoost, SHAP explainability, and a production-ready FastAPI service.

02/2026 – 03/2026

ConceptLens [↗](#)

ConceptLens is an advanced education platform designed to help professors create exams, analyze student performance, and detect learning misconceptions using AI. It bridges the gap between assessment and understanding with intuitive dashboards and scalable architecture.

11/2024 – 05/2025

LegalPal [↗](#)

Welcome to LegalPal, an advanced legal ecosystem designed to bridge the gap between complex legal systems and everyday people. Whether you are a citizen seeking clarity, a law student practicing for the courtroom, or a legal professional streamlining research, LegalPal is your intelligent companion.
